

Project 1: Implement azure active directory (azure ad) authentication

Objective: implementing azure active directory (azure ad) authentication for a web application

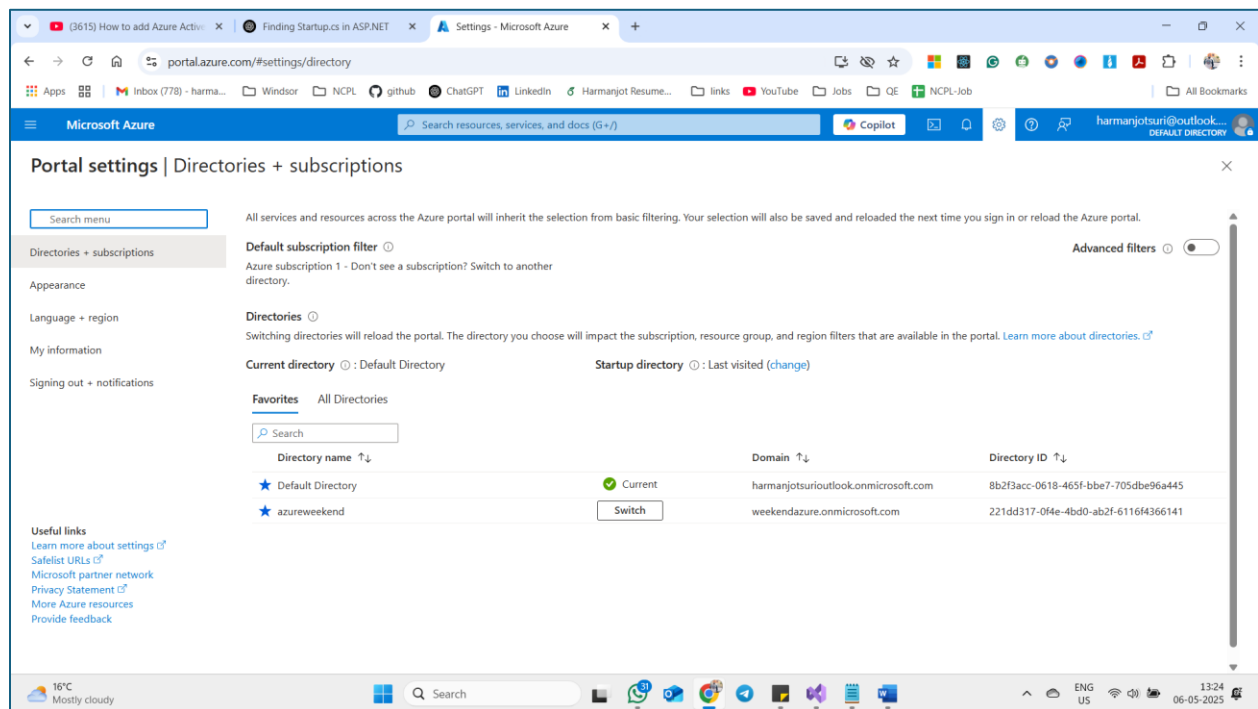

Step-By-Step:

- <https://learn.microsoft.com/en-us/azure/active-directory/develop/>

- <https://learn.microsoft.com/en-us/aspnet/core/security/authentication/azure-active-directory/>

1.Create an azure active directory (azure ad) tenant.

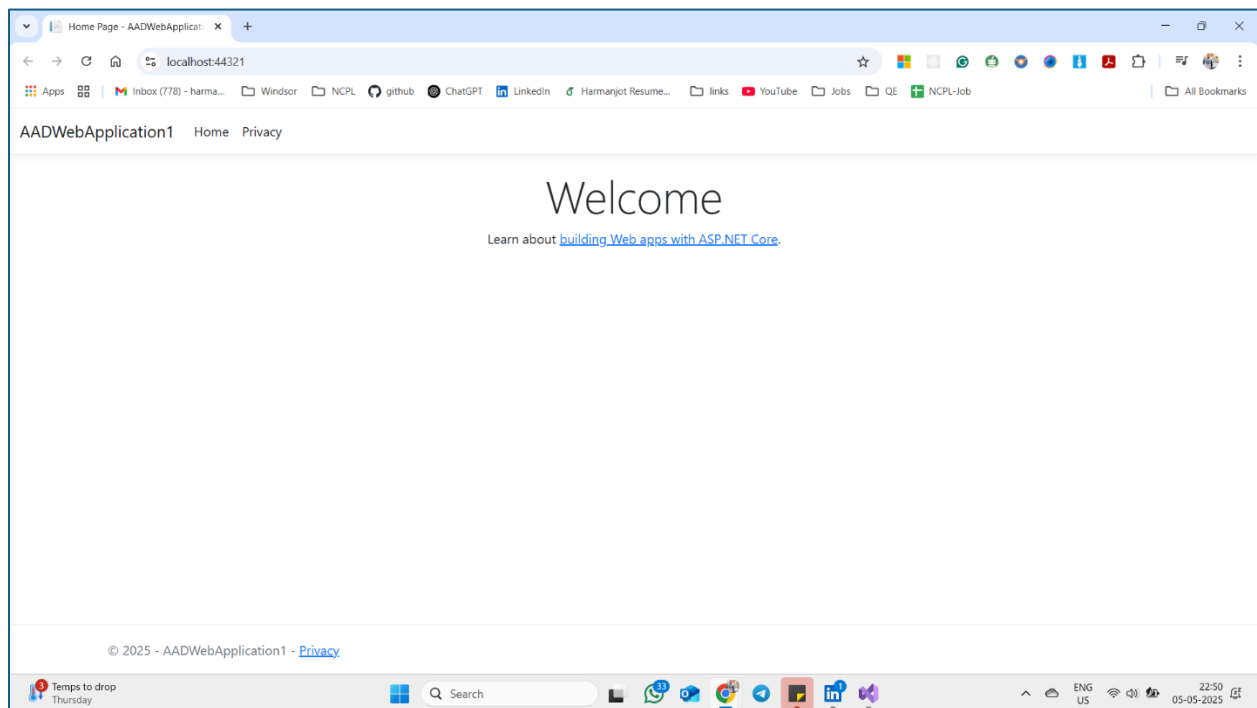

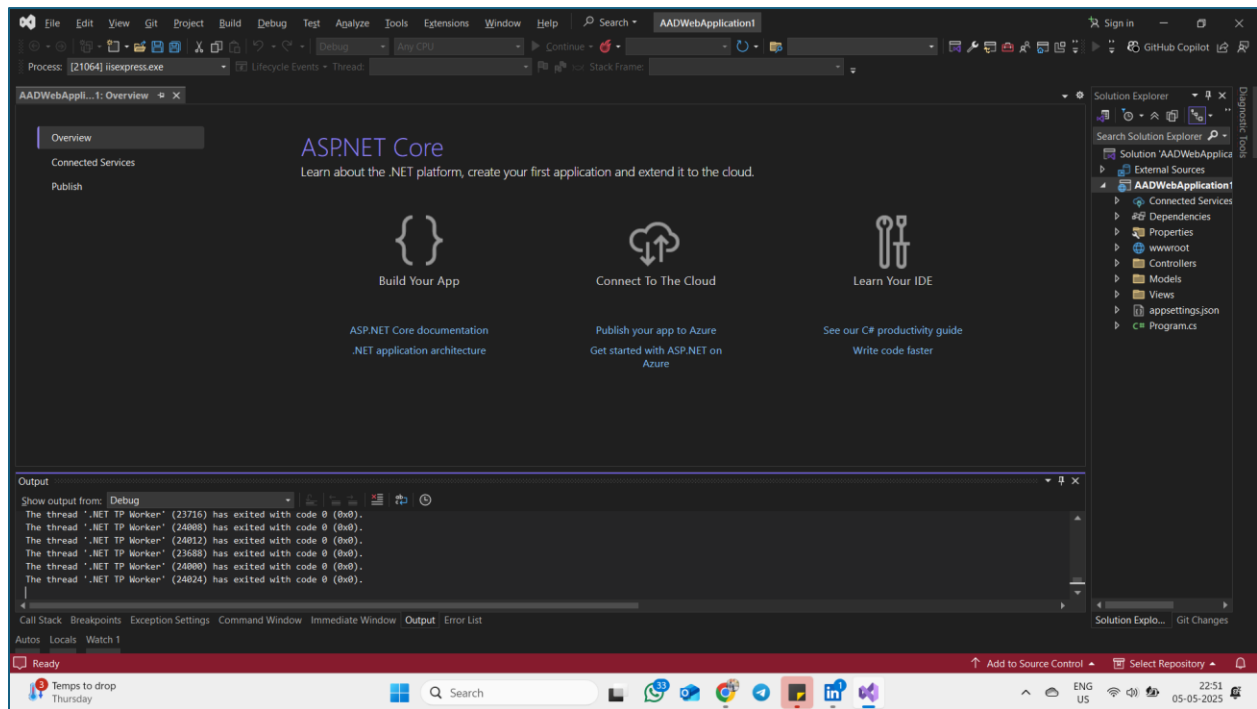

2.Create ASP.NET MVC Application

MVC stands for Model–View–Controller — it's a software architectural pattern used to build web applications in a structured and maintainable way.

Model – The data layer

View – The UI layer

Controller – The logic layer

3.Register an application in azure ad

Azure App Registration is the process of registering your application in Azure Active Directory (Azure AD) so it can:

Authenticate users (sign in), Access Microsoft APIs (like Microsoft Graph), Be secured with tokens (OAuth 2.0 / OpenID Connect)

The screenshot shows the 'Register an application' page in the Microsoft Azure portal. The browser address bar shows the URL: `portal.azure.com/#view/Microsoft_AAD_RegisteredApps/CreateApplicationBlade/quickStartType~/null/~/~/false`. The page title is 'Register an application'. It includes a search bar, a 'Copilot' button, and a user profile 'harmanjotsuri@outlook...'. The main content area has a 'Name' field with the value 'AADWebApplication1' and a dropdown arrow. Below this is a section for 'Supported account types' with radio buttons for different account scopes. The 'Redirect URI (optional)' section is also visible. At the bottom, there is a 'Register' button and a status bar showing '13°C Cloudy' and the date '05-05-2025'.

Home > App registrations > Register an application

* Name

The user-facing display name for this application (this can be changed later).

AADWebApplication1

Supported account types

Who can use this application or access this API?

☒ Accounts in this organizational directory only (Default Directory only - Single tenant)

☐ Accounts in any organizational directory (Any Microsoft Entra ID tenant - Multitenant)

☐ Accounts in any organizational directory (Any Microsoft Entra ID tenant - Multitenant) and personal Microsoft accounts (e.g. Skype, Xbox)

☐ Personal Microsoft accounts only

[Help me choose...](#)

Redirect URI (optional)

We'll return the authentication response to this URI after successfully authenticating the user. Providing this now is optional and it can be

By proceeding, you agree to the [Microsoft Platform Policies](#)

Register

The screenshot shows the 'AADWebApplication1' overview page in the Microsoft Azure portal. The browser address bar shows the URL: `portal.azure.com/#view/Microsoft_AAD_RegisteredApps/ApplicationMenuBlade/~/Overview/appld/a170b965-ac86-42d2-8062-...`. The page title is 'AADWebApplication1'. It includes a search bar, a 'Delete' button, and a 'Preview features' button. The main content area has a left sidebar with navigation links: 'Overview', 'Quickstart', 'Integration assistant', 'Diagnose and solve problems', 'Manage', and 'Support + Troubleshooting'. The 'Overview' section displays 'Essentials' information: Display name, Application (client) ID, Object ID, Directory (tenant) ID, Client credentials, Redirect URIs, Application ID URI, and Managed application in. Below this is a 'Get Started' section with a 'Documentation' link. At the bottom, there is a 'Build your application with the Microsoft identity platform' section with a brief description and a 'Learn more' link. The status bar at the bottom shows '13°C Cloudy' and the date '05-05-2025'.

Essentials

Display name : AADWebApplication1

Application (client) ID : a170b965-ac86-42d2-8062-9abf69835c14

Object ID : 4e2084d0-5a4c-43d5-89c6-a29e45c46e18

Directory (tenant) ID : 8b2f3acc-0618-465f-bbe7-705db96a445

Client credentials : [Add a certificate or secret](#)

Redirect URIs : [Add a Redirect URI](#)

Application ID URI : [Add an Application ID URI](#)

Managed application in : [AADWebApplication1](#)

Supported account types : [My organization only](#)

Welcome to the new and improved App registrations. Looking to learn how it's changed from App registrations (Legacy)? [Learn more](#)

Starting June 30th, 2020 we will no longer add any new features to Azure Active Directory Authentication Library (ADAL) and Azure Active Directory Graph. We will continue to provide technical support and security updates but we will no longer provide feature updates. Applications will need to be upgraded to Microsoft Authentication Library (MSAL) and Microsoft Graph. [Learn more](#)

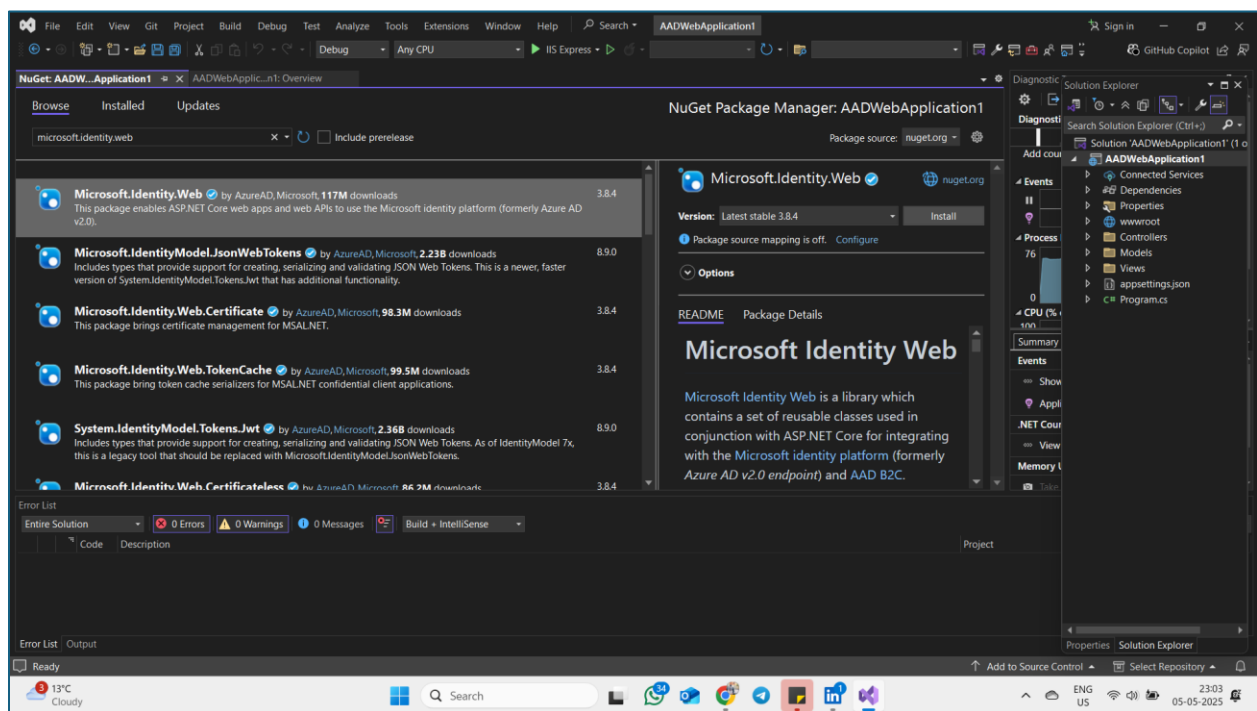

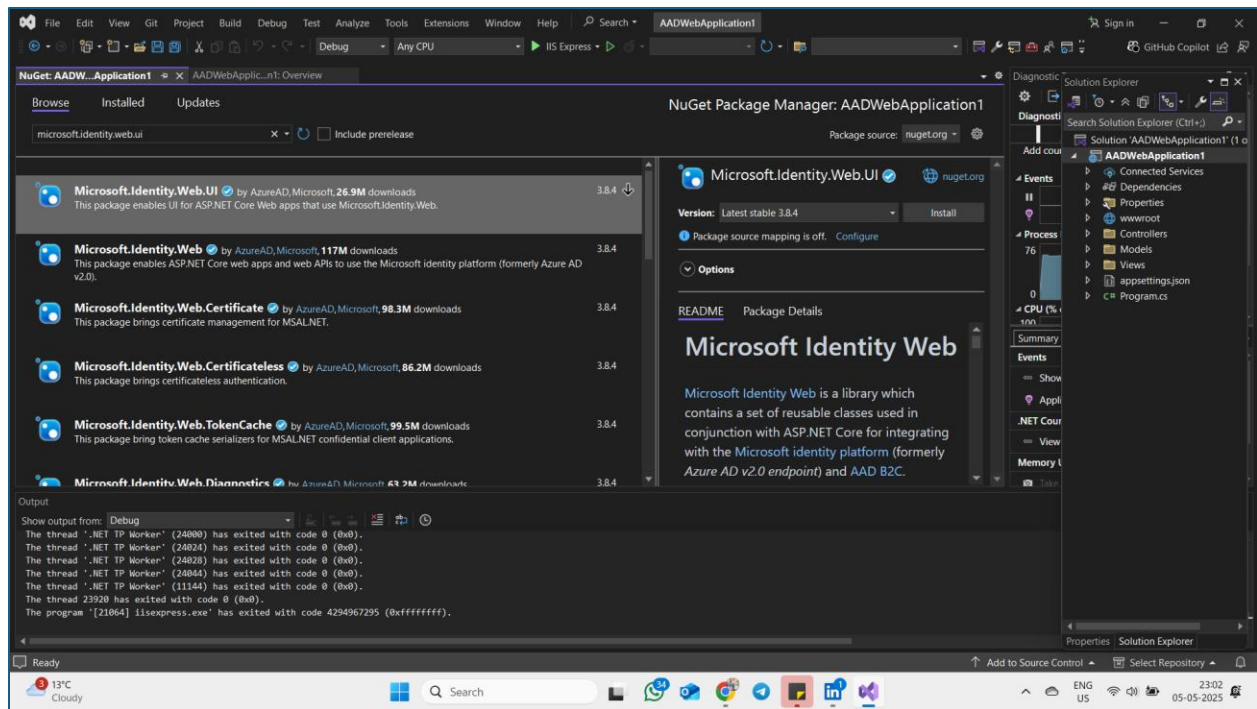

Get Started Documentation

Build your application with the Microsoft identity platform

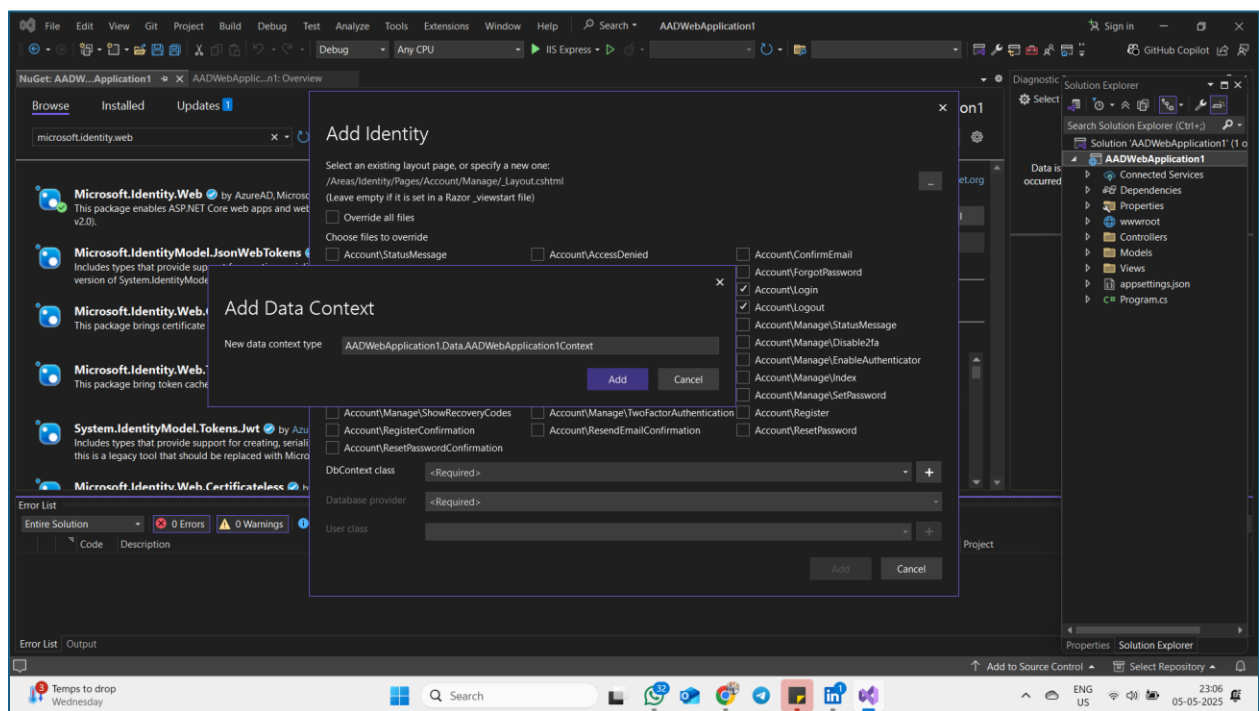

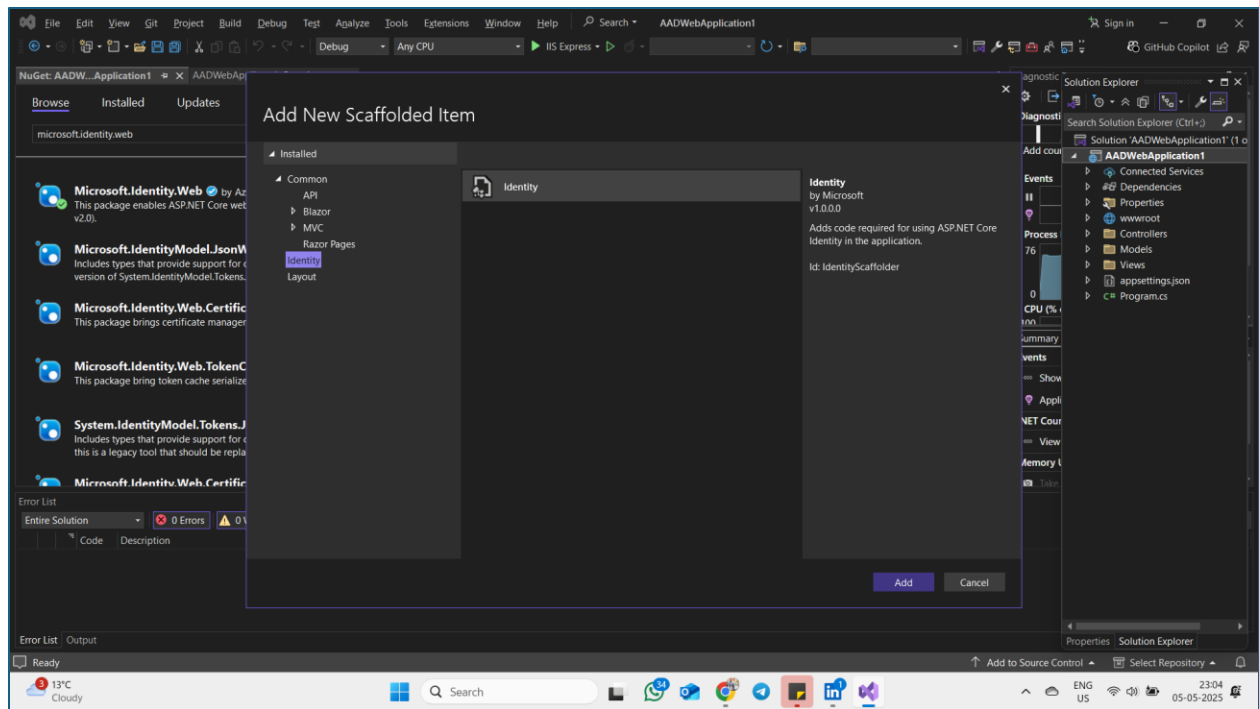

The Microsoft identity platform is an authentication service, open-source libraries, and application management tools. You can create modern, standards-based authentication solutions, access and protect APIs, and add sign-in for your users and customers. [Learn more](#)

4. Configure authentication and authorization settings for the application

Download dependencies Nuget package- Microsoft Identity Web and Microsoft Identity Web UI

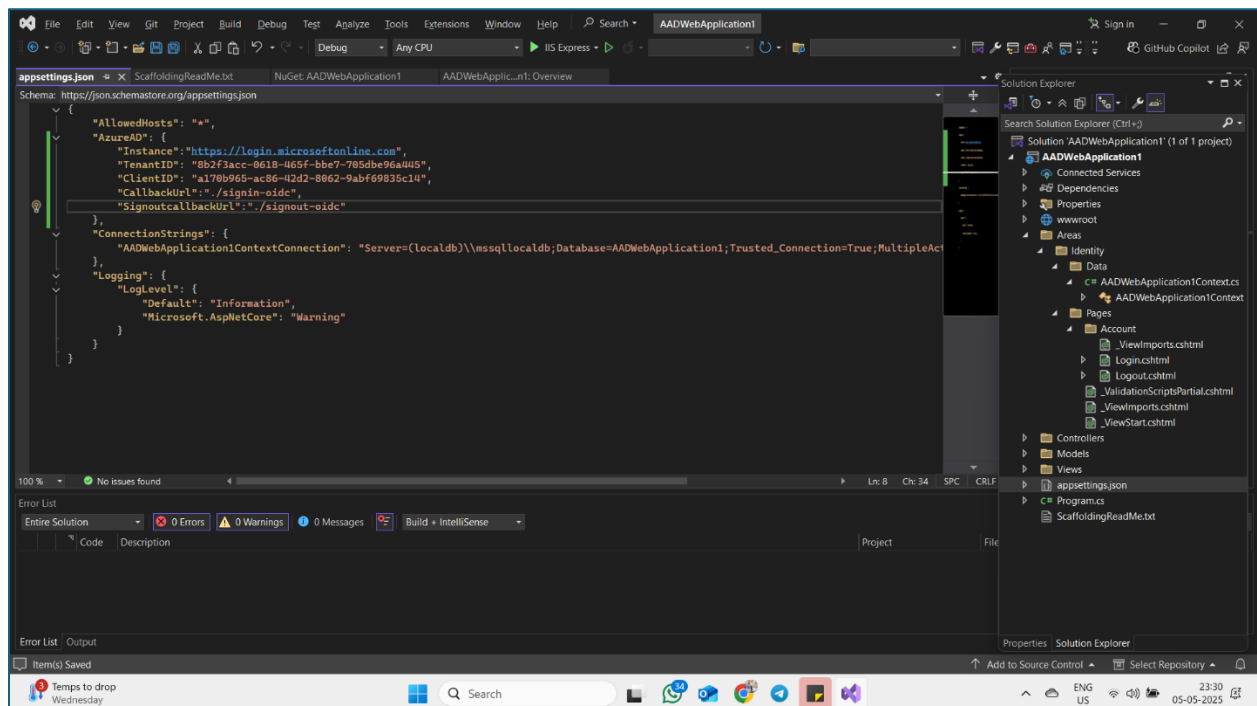

Add Scaffolded Items, Add Identity: Login and Logout

5. Implement Azure AD authentication in a web application.

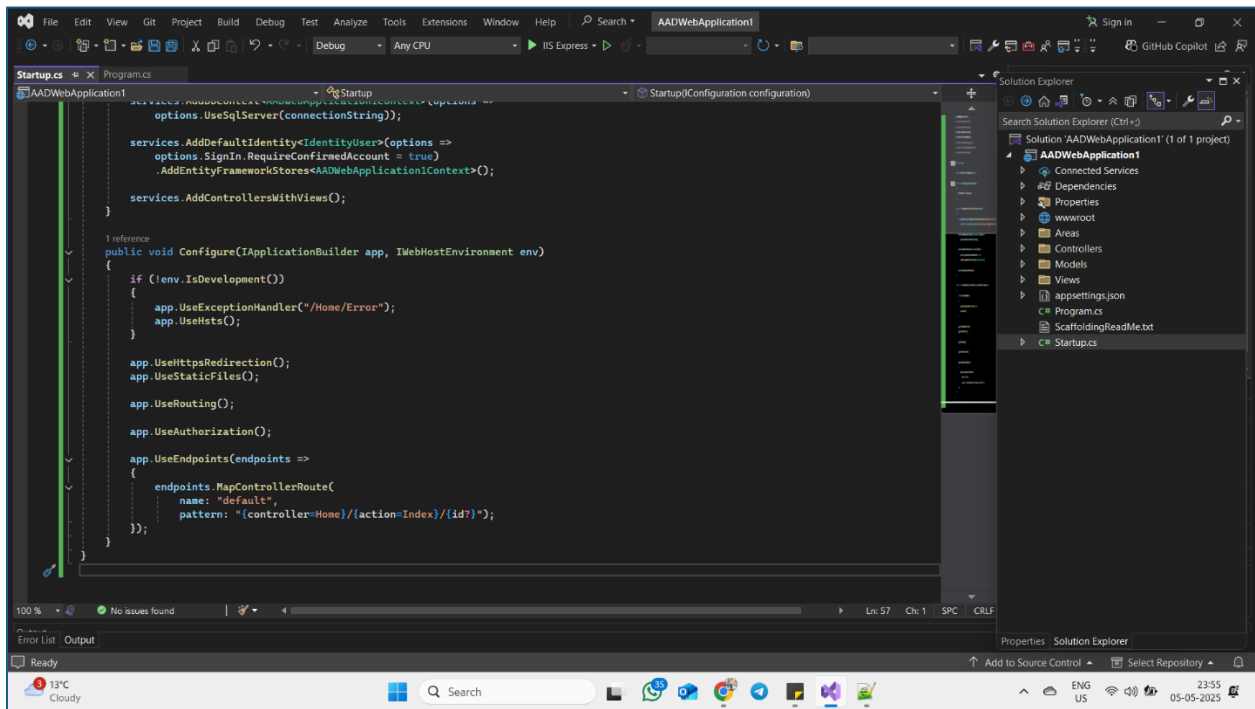

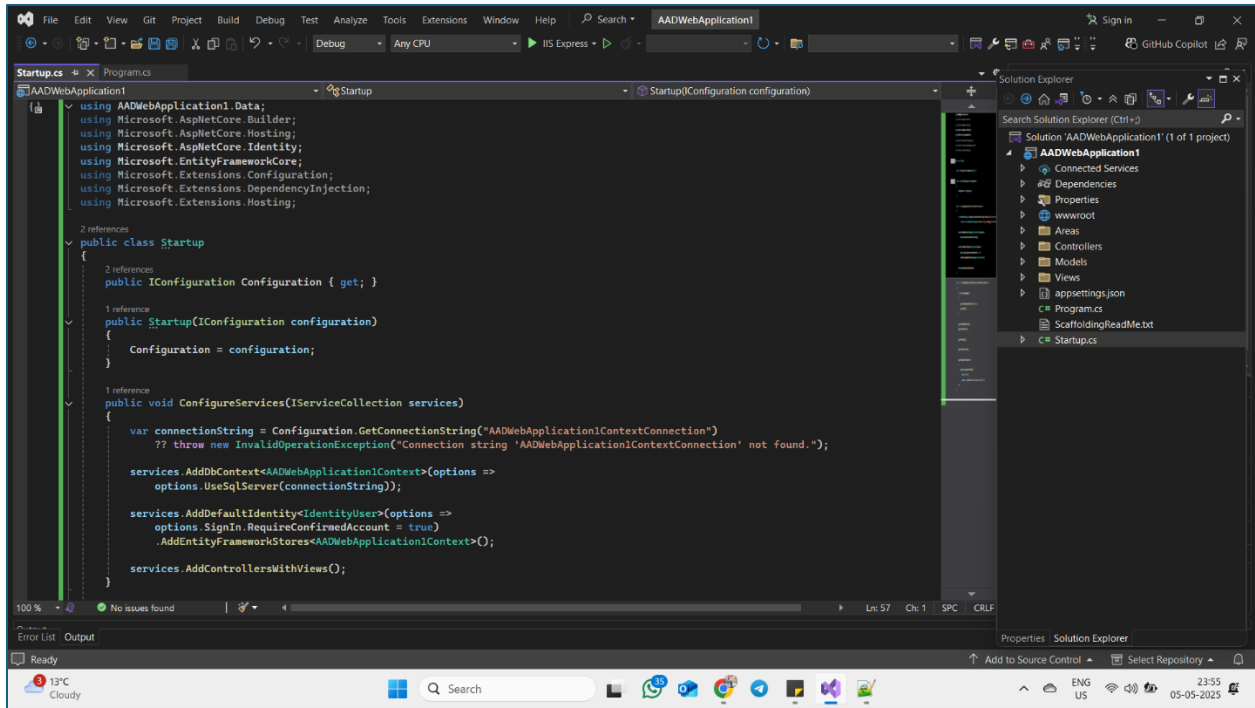

(Add AzureAD in appsettings.json to configure Azure App Registration)

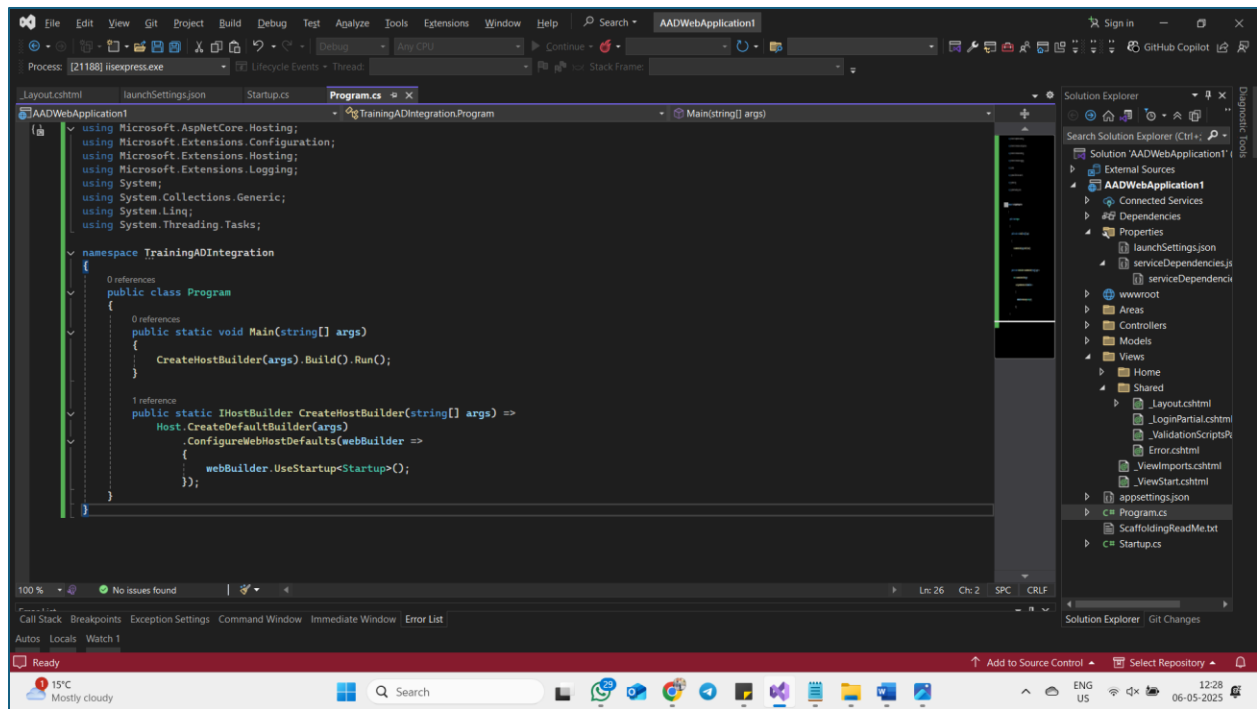

Modify startup.cs and program.cs

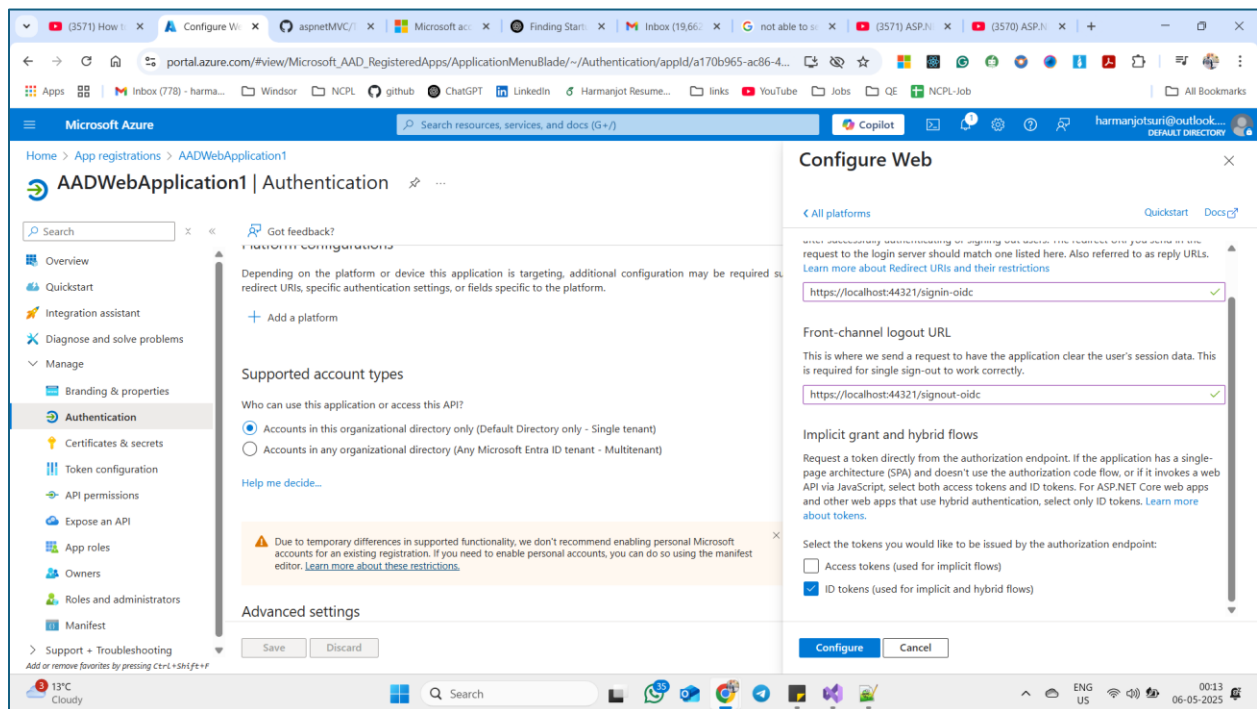

Program.cs sets things up and calls methods in Startup.cs.

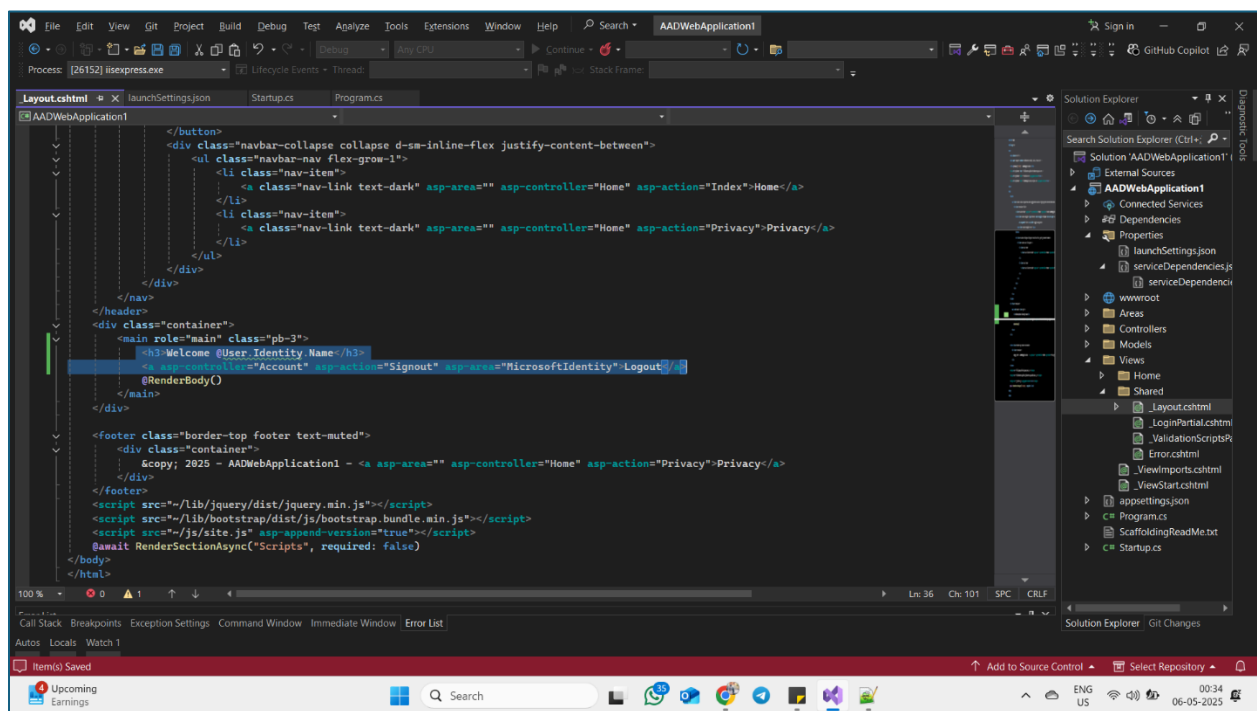

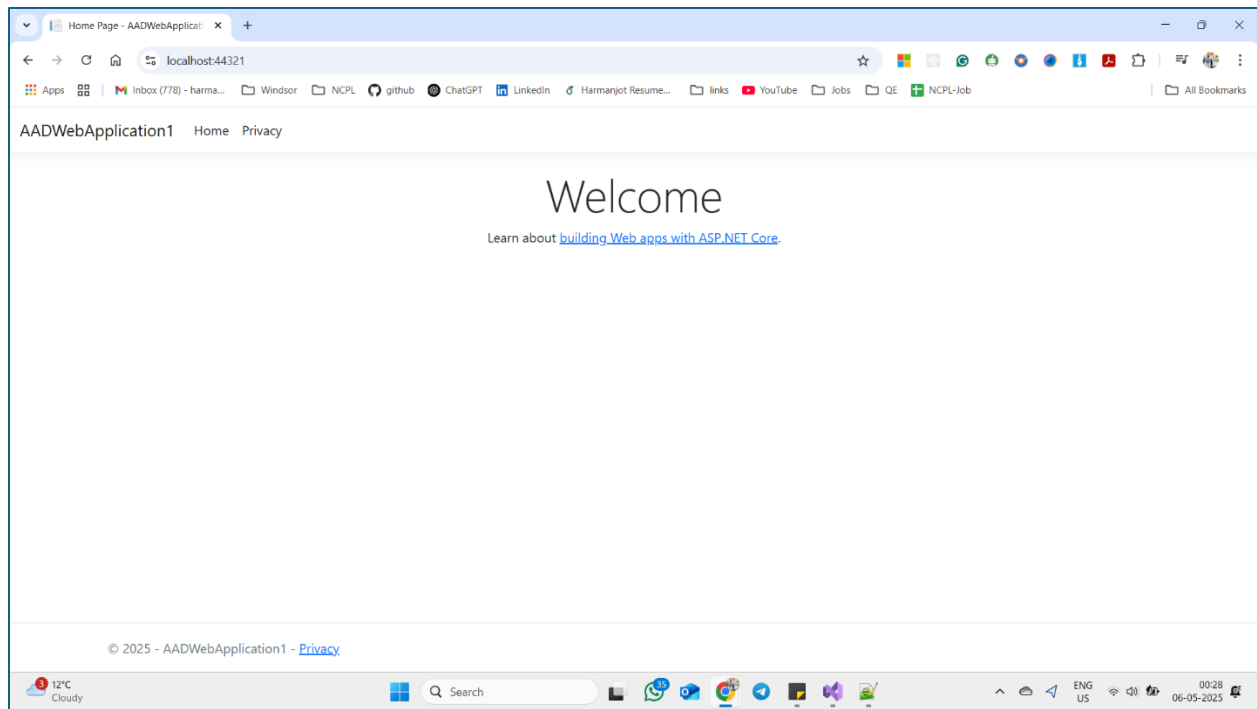

Startup.cs configures what the app can do and how it should respond to requests.

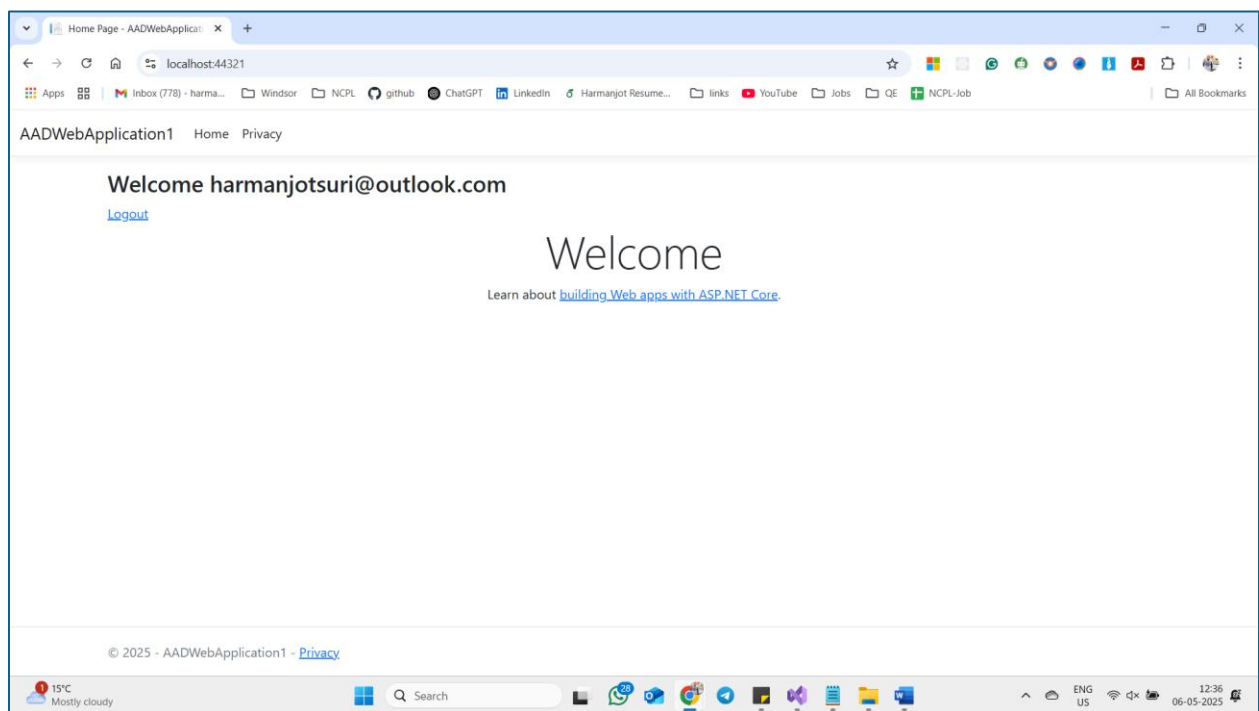

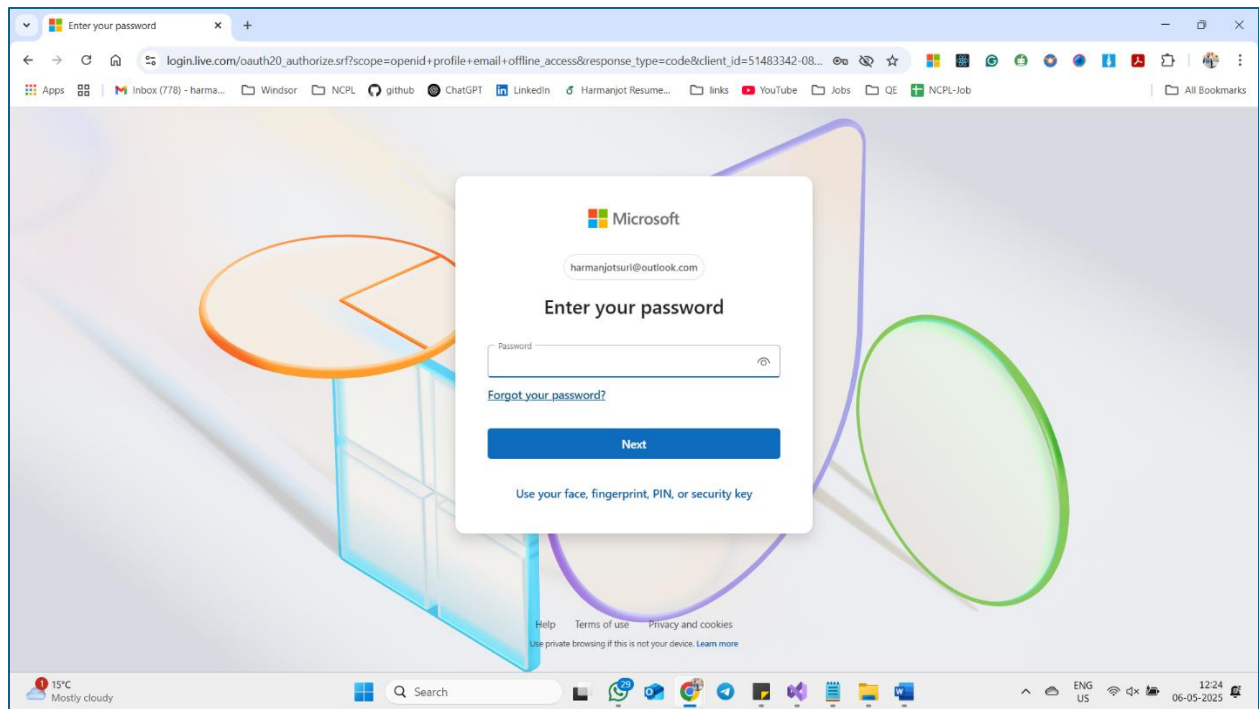

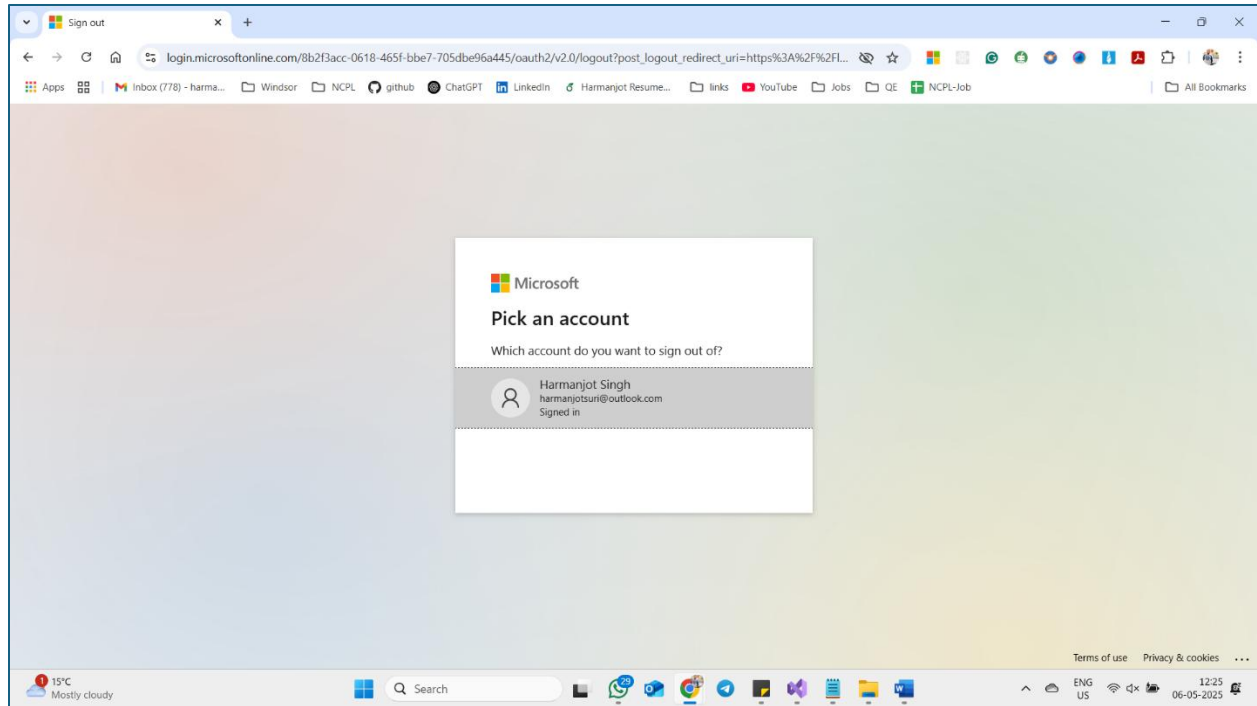

Open Azure app registration, authentication and add redirect url , front-channel logout url.

6. Test authentication flow and access control using Azure AD users and groups.

Deliverables:

azure ad tenant configuration.

registered application in azure ad.

authentication and authorization settings for the application.

web application with azure ad authentication implemented.

test results and any necessary troubleshooting documentation.

configuration for enabling sso (if applicable)
